Nature is Above All

Stonelam porcelain slabs are a natural choice for environmentally conscious customers. Made from 100% natural materials like clay, metamorphic rocks, granite chips and feldspar, Stonelam offers a sustainable choice with minimal geological impact. The core philosophy of Stonelam is - Nature is Above All and that resonates with the product and its features.

Manufactured
in Italy

Manufactured in Italy

Production Plant, Borgo Val di Taro, Italy

Conceived and curated in Italy which is also known as 'il Belpaese'(beautiful country), Stonelam Large Format Porcelain Slabs are a perfect symphony of beauty and nature. Intricately created by a sophisticated technology the slabs are a mere 3mm⁺ and 5mm⁺ thick. The slabs are a perfect mix of modern science and nature. Born to impress every eye that it captures, Stonelam slabs are designed with natural pigments that create a niche out of themselves.

Scan to watch the Manufacturing Process

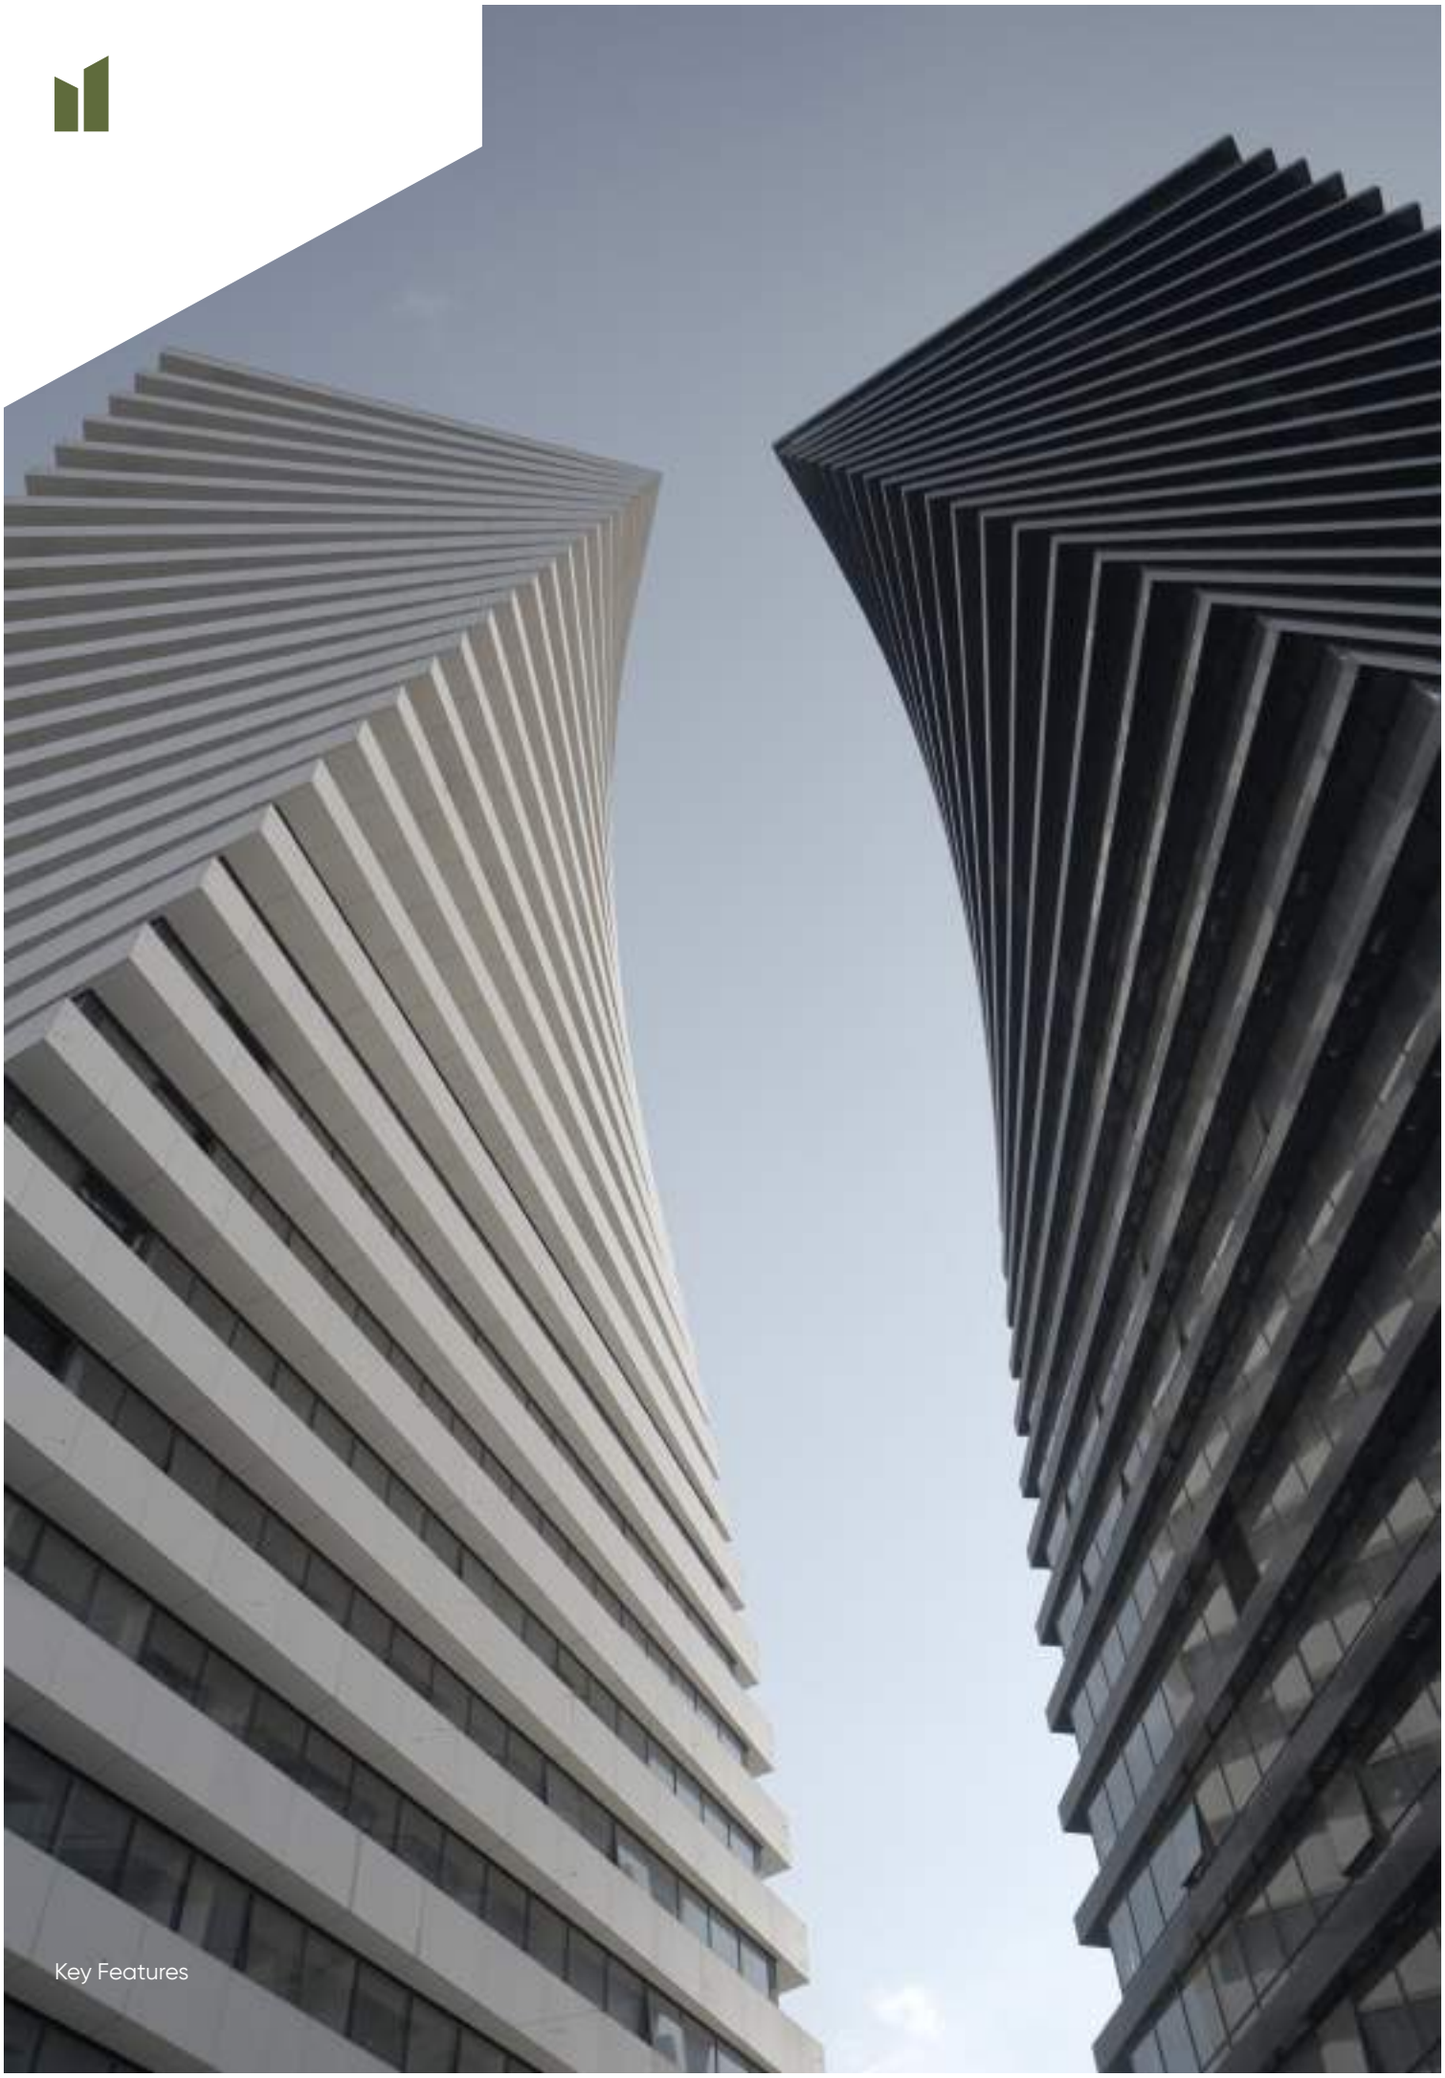

The Power
of Diamond

The Power of Diamond

Stonelam porcelain slabs are made by a sophisticated process called Sintering -

- Similar to the creation of American diamonds.
- The raw materials are heated at 1200 degrees under a pressure of 6 bars.
- The final product becomes a non-porous hard porcelain slab.

Key Features

Key Features

Stonelam porcelain slabs are made up of 100% natural materials and pigments, carefully manufactured in Italy

UV RESISTANT

Stonelam slab colours do not fade away when exposed to sunlight or other extreme weather conditions

FIRE RESISTANT

No organic materials are used in the production of Stonelam slabs. When in contact with fire, it does not burn or emit smoke or toxic substances

SCRATCH RESISTANT

Stonelam slab's hard surface makes it resistant to scratches and abrasions. The properties remain unchanged even after intensive use and frequent cleaning

ECO-FRIENDLY

Stonelam slabs are made from natural raw materials and sustainable technology. It does not emit any harmful substances into the environment

CHEMICAL RESISTANT

Stonelam slabs are resistant to most organic and inorganic solvents*

WATER & FROST RESISTANT

With a water porosity level of lesser than 0.1%, Stonelam slabs are resistant to liquids and frost and can handle low temperatures with ease

GRAFFITI AND STAIN-PROOF

Stains of any kind and the strongest of paints can be easily removed from Stonelam slabs, making the colour last longer

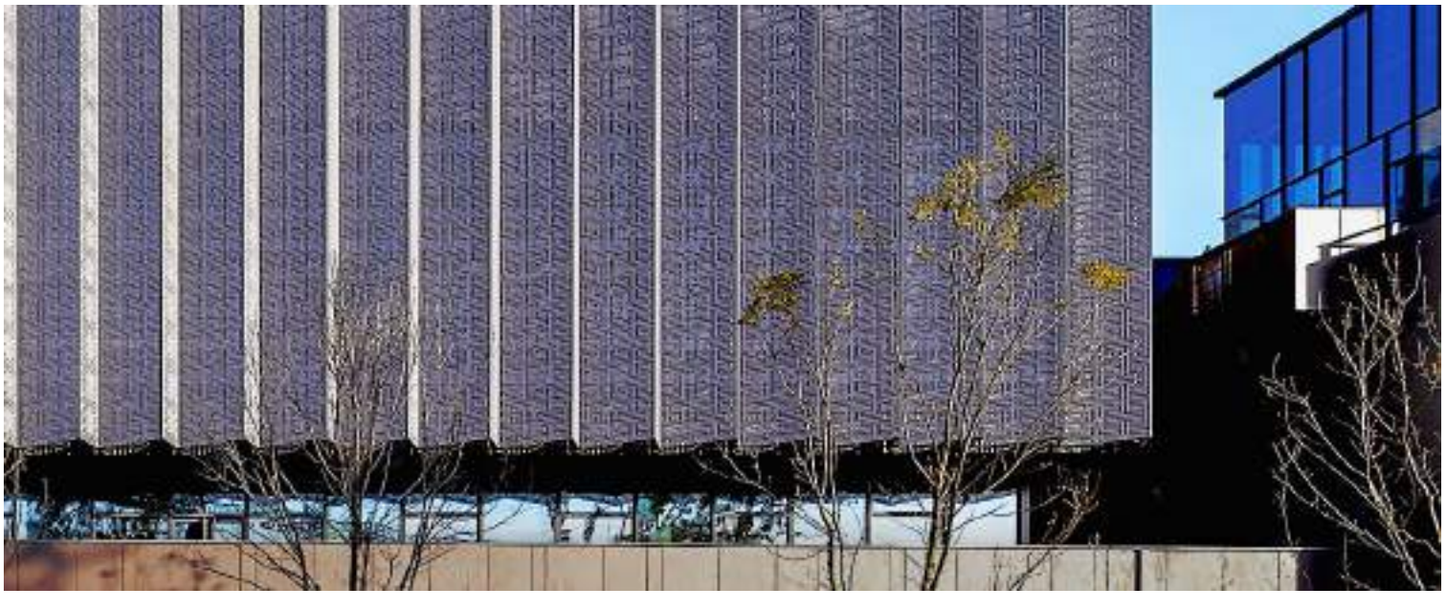

THE FIBREMESH ADVANTAGE

Stonelam structurally reinforces slabs with double-coated fibremesh. This allows for superior bonding with the original structure and sturdier application

WEATHER-PROOF

Stonelam slabs can resist moisture, UV rays, high temperatures and frost. This enables them to retain their features and chromatic properties for long periods of time when compared to traditional solutions like natural stones, ACP and paints

*Hydrofluoric acid being the only exception

DIMENSIONAL STABILITY

Stonelam slabs are not subject to dimensional variation of any significance, as they have a low coefficient of thermal expansion

CUT TO FIT YOUR WALLS PERFECTLY

Stonelam slabs are 3 metres in length, that is the height of an average Indian room. This means a perfect fit, zero wastage or rough cuts

25 YEARS WARRANTY

Stonelam's commitment to the protection and preservation of every slab's properties makes it one of the few providers of a 25-Year colour warranty

EXTREMELY LIGHTWEIGHT

With 3mm+ slabs weighing 750g/sq ft, Stonelam slabs are easy to handle and add less dead load to buildings. This also has other advantages like lower application costs, time saving and lesser wastage

PERFECT RIGHT ANGLES

Stonelam slabs are cut at perfect 90-degree angle, removing the need for additional cutting. This reduces unnecessary wastage and leads to lower costs and superior aesthetics

Projects

Stonelam Shaping a Sustainable Future

Welcome to the world of Stonelam. Since 2017, we've been shaping India's architectural landscape with over **15+ million square feet** installed across the country. We've given building exteriors a bold new identity that stands Above All. Our focus lies in creating sustainable, design-forward spaces—driven by innovation and a steadfast commitment to architectural brilliance. Each project reflects our journey and our passion for shaping a better future.

Stonelam Facade System (SFS)

Stonelam with its impeccable finesse is the choice for the most exquisite facades today. Our 25-Year colour warranty topped with durability makes it a perfect match for your home. But strengthening this bond comes with attaining that utmost perfection. And here's where Stonelam steps in with its expertise. Working over the years, the brand has developed a team of credible professionals who are adept in dry cladding, the only right way of installing facades. Authorized and trained in this kind of cladding, the team offers an end-to-end solution to its customers in installation followed by maintenance

Specifications

Technical Specifications

STONELAM® 3 mm+

Stonelam® 3 mm+ is the basic slab structurally reinforced with a fibreglass mesh attached to the back with a special adhesive. Nominal thickness: 3mm+

Stonelam® porcelain obtained by wet grinding of clayish raw materials, granite and metamorphic, feldspar - containing rocks and ceramic pigments. Compacted by a special shaping in compactor and sintering at 1200°C, with hybrid firing. With single gauge square edge and with a structural reinforcement in inert material.

ENVIRONMENTAL POLICIES

QUALITY CONTROL

Stonelam® constantly controls the quality of its products during all the stages of production. The controls are carried out in full compliance with the international standard UNI EN ISO 9001, which defines the requirements for the implementation of a quality management system within an organisation.

The corporate processes are geared to improve efficiency in the production and increase customer satisfaction.

ENVIRONMENTAL SUSTAINABILITY AND MATERIALS RECYCLING

The management bases all the research and development projects on its social responsibilities, reducing the environmental impact of production activities in relation to the consumption of resources. Respect for the environment, which characterises Laminam (Stonelam® partner) and its corporate policy, has led to the installation of a photovoltaic plant for the production of clean electricity on the roof of its factory in Fiorano Modenese. In one calendar year the plant guarantees the production of approximately 1,387 GWh, thereby allowing Stonelam® to produce 10% of its domestic electricity requirements, and, in terms of reduction of CO2, emissions, corresponds to the contribution made by 105 hectares of forest.

The main raw materials used in the production of Stonelam® ceramic slabs are clay, feldspar and sand of certified origin: these substances are qualitatively selected scrupulously to ensure a homogeneous composition, free of impurities.

Depending on the type, Stonelam® slabs contain 20% to 40% of pre-consumer recycled material, i.e. re-used industrial wastes. In addition, as they are made of natural products, the slabs can be easily ground and recycled in other production cycles and do not release elements into the environment. The choice of using recycled raw materials results in environmental benefit that can be measured in terms of CO2 emissions not released into the atmosphere.

Each stage of the production process of Stonelam® slabs is designed and developed to guarantee maximum energy efficiency and the minimum environmental impact. The evolved and patented pressing process, which, thanks to the best techniques, significantly reduces consumption and the use of hybrid gas-electric kilns that significantly reduce emissions are examples. Moreover, the lightness of the slabs and the accurate design of the packaging minimise storage space and limit the environmental impact of transport, optimising the processes as compared to other products with heavier surfaces.

Stonelam® is a member of the Green Building Council association, which operates within the framework of sustainable environmental development in the constructions sector. The GBC members promote the dissemination of a culture of sustainable building construction generating a stimulus to opt for natural resources that have the least possible impact for the region and for society.

Properties

PHYSICAL & CHEMICAL PROPERTIES	NORM / TEST METHOD	STONELAM® 3MM+	STONELAM® 5MM+
SIZE/DIMENSIONS	**SO 10545-2**	**Max. Deviation on the side +/- 0.5mm**	**Max. Deviation on the side +/- 0.5mm**
SIZE/DIMENSIONS	**Laminam®**	**Max. Deviation on the diagonal +/- 1.0mm**	**Max. Deviation on the diagonal +/- 1.5mm**
WEIGHT	**Laminam®**	**Average value 8.2 kg/m2**	**Average value 14.9 kg/m2**
